Build & Development Settings

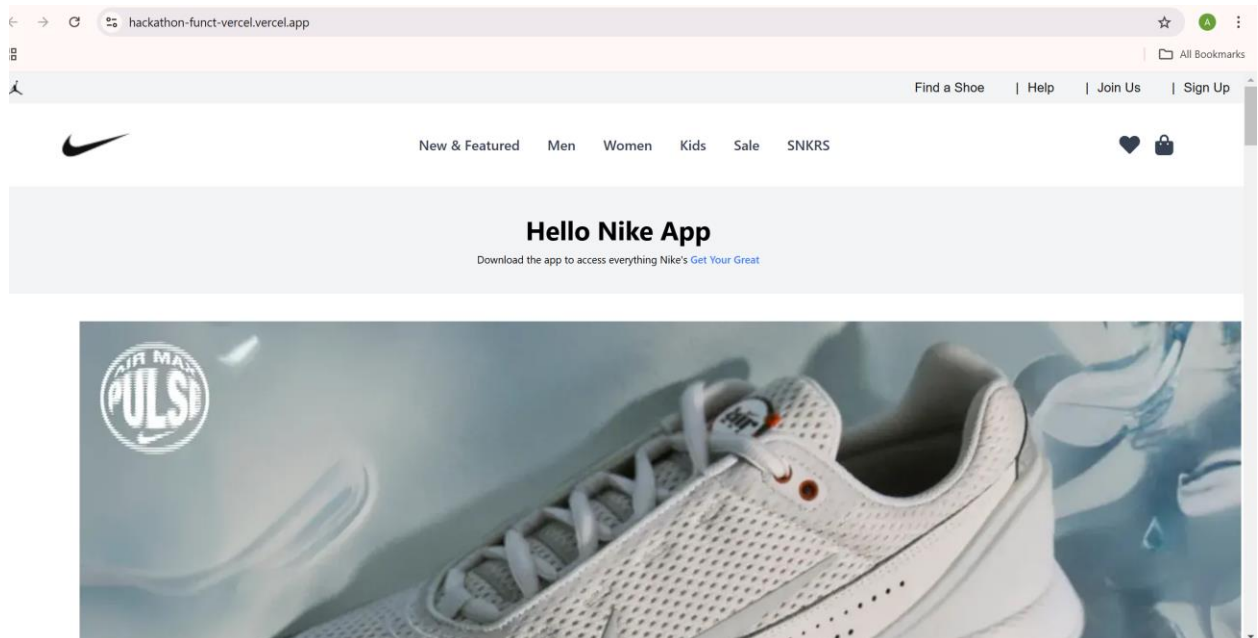

When using a framework for a new project, it will be automatically detected. As a result, several project settings are automatically configured to achieve the best result. You can override them below.

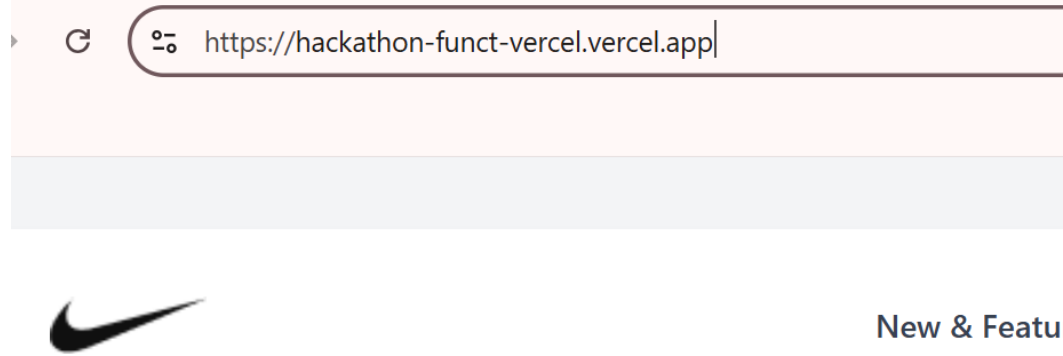

Framework Preset

Deployment Details:

- **Hosting Provider:** Vercel
- **Production Readiness Checks:** ✔ SSL, ✔ SEO Optimization, ✔ Mobile Responsiveness
- **Security Measures Implemented:** HTTPS, Secure API Calls, Role-based Access.

Post-Launch Monitoring & Maintenance:

- **Monitoring Tools:** Google Analytics, Vercel Analytics
- **Scheduled Maintenance:** Regular security updates, performance monitoring, and feature enhancements.

Future Enhancements:

- Integration of AI-powered fashion recommendations.
- Multi-vendor marketplace functionality for expanded product offerings.
- Advanced analytics dashboard for tracking user behavior and sales performance.

Final Reflection:

- **Challenges Faced & Solutions Implemented**

- **Sanity Data Fetching:**

Overcame issues with dynamic content display by optimizing GROQ queries and structuring API responses effectively.

- **Vercel Deployment:**

Resolved build failures caused by misconfigured environment variables by correctly setting them in Vercel's dashboard and troubleshooting deployment logs.

- **Lessons Learned from the Project:**

- Gained proficiency in working with headless CMS and optimizing data fetching.
- Strengthened debugging and deployment skills, especially with Vercel.

- **How This Experience Contributes to Future Projects:**

- Improved ability to integrate and manage dynamic content from a headless CMS.
 - Gained confidence in handling deployment challenges and ensuring smoother launches in future projects.
-
